

SEL711/712 Series Programmable DC Electronic Load

150/300W, 0-15/30/60A, 0-150/500V

Key Features

- Six high speed operation modes: CC, CR, CV, CW, CC+CV, CR+CV
- Over current, over voltage, over power, over heating and polarity reversal protection
- High-luminance vacuum fluorescent display (VFD) screen with two line, four channel display
- Intelligent fan system will automatically activate based on changing ambient temperatures
- Soft-start time setting, activating the power supply in accordance with the set voltage value
- Battery test and short-circuit test functions
- Capable of rising edge and falling edge dynamic testing
- Supporting external trigger on either input or output
- External current waveform monitor terminal output terminal
- Supports remote voltage compensation and multi-data storage
- Power-on-self-test, software calibration and standard rack mountable
- Edits arbitrary waveforms in list function
- Available with RS232/RS485/USB serial interfaces

Typical Applications

- Research institute
- Production lines
- Solar cell and fuel cell
- Automotive electronic, aeronautic and astronautic, maritime

The new SEL7XX series programmable DC electronic load is a new generation product designed by Saluki Technology. Incorporating high-performance chips, the SEL7XX series delivers high speed and high accuracy with a resolution of 0.1 mV and 0.01 mA (basic accuracy is 0.03% and basic current rise speed is 2.5 A/ μ s). SEL7XX series have wide application from production lines for cell phone chargers, cell phone batteries, electronic vehicle batteries, switching power supplies, linear power supplies, and LED drivers, to research institute, automotive electronic, aeronautic and astronautic, maritime, solar cell and fuel cell etc. test and measurement applications.

TECHNOLOGY

SEL711/712 Series Programmable DC Electronic Load

150/300W, 0-15/30/60A, 0-150/500V

Automatic Test

The SEL7 series electronic load is available of automatic test function. 8 sets of data can be edited at most and 50 steps can be edited in each set of data. Each step can be edited in six working modes (load off mode, constant current mode, constant voltage mode, constant resistance mode, short circuit mode) and can be available of four types of parameters from current comparison, voltage comparison, power comparison and resistance comparison. Besides, the delay time of each step ranges can be also edited. The delay time of each step ranges from 0.1s to 25.5s, considering the quickness and accuracy. Moreover, SEL7 series electronic load equipped with PC monitoring software allows quick editing test steps, test report output to the EXCEL table by computer operation.

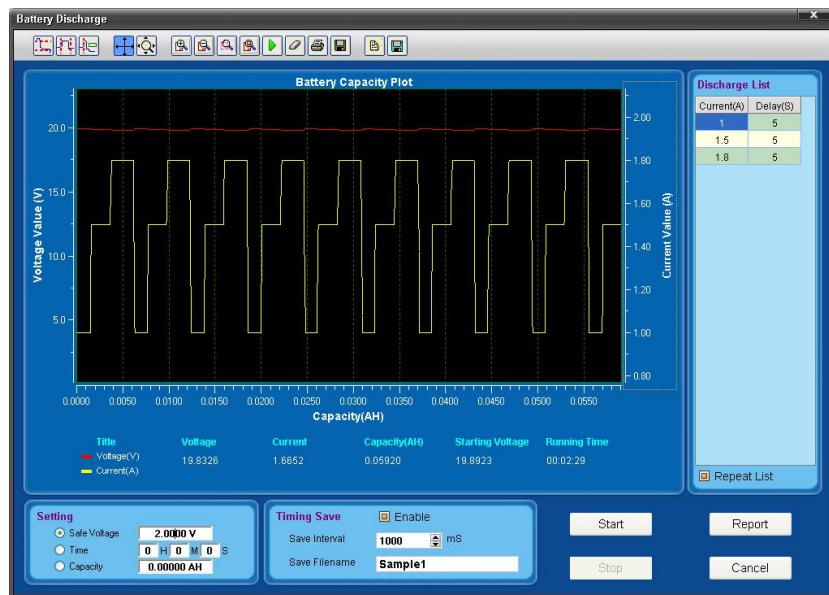

Battery Test

Constant current mode is applied in SEL7 series electronic load to test the battery capacity. A program is set to control voltage level. When the voltage of the battery is too low, the electronic load will indentify the battery being on the threshold value set or at the margin of insecure state and will stop testing automatically. When the load is in testing procedure, you can see the battery voltage, battery discharge current, power and battery capability that has been spared. If the load is connected with PC software, then you can see the discharge curve of battery discharge. This test can set out the reliability and remaining life of battery.

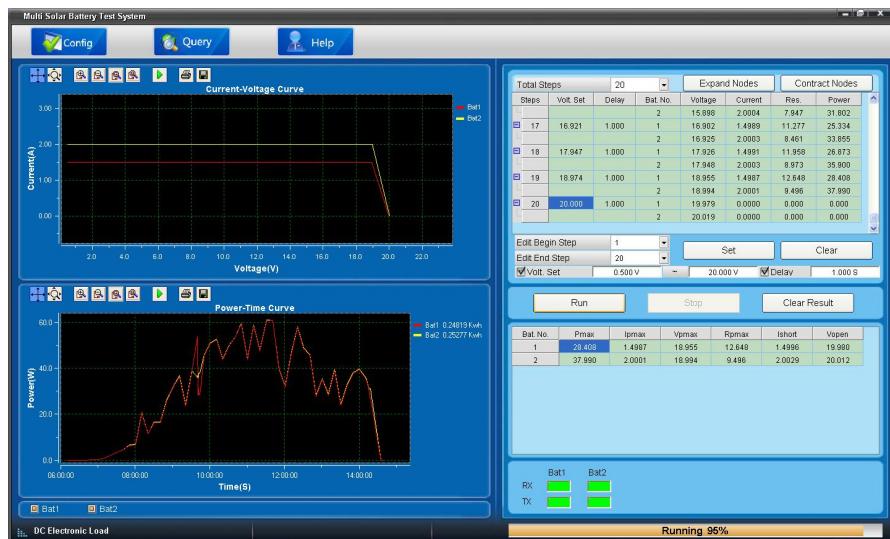

SEL711/712 Series Programmable DC Electronic Load

150/300W, 0-15/30/60A, 0-150/500V

Solar Cell Test

SEL7 series programmable electronic load equipped with solar cell test software can test multi-channel solar cell parameters, query the test report according to the date, preview the test report that need to be printed and fast print the test report, etc by computer operation.
